RIVER FORECAST

Cal OES INLAND REGION

River Forecast – The following rivers are expected to meet or exceed Flood Stage:

Placer County:

- Truckee River at Truckee - As of 04/09/18 at 1320 hours, releases from the Lake Tahoe Dam will increase, leading to minor flooding along the Truckee River from below the dam to the Truckee area. The river is expected to see flows between 4.4 feet and 4.6 feet through 04/14/18. Flood stage is 4.5 feet.
 - Minor flooding will impact the Truckee River bike path and Deep Creek campground. Water may also inundate some yards and basements of homes near the river.

River Forecast – The following rivers are expected to meet or exceed Monitor Stage:

Colusa County:

- Sacramento River at Tisdale Weir crested at 48.0 feet early the morning of 04/09/18. As of 04/10/18 at 0700 hours, it is at 46.1 feet and continues to recede. Flood stage is 53.0 feet.

Sutter & Yolo Counties:

- Sacramento River at Fremont Weir crested at 33.2 feet the morning of 04/09/18. As of 04/10/18 at 0700 hours, it is at 32.8 feet and continues to recede. Flood stage is 39.5 feet.

Merced County:

- Merced River at Stevinson is expected to crest at 67.7 feet the evening of 04/11/18. Flood stage is 71.0 feet.

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

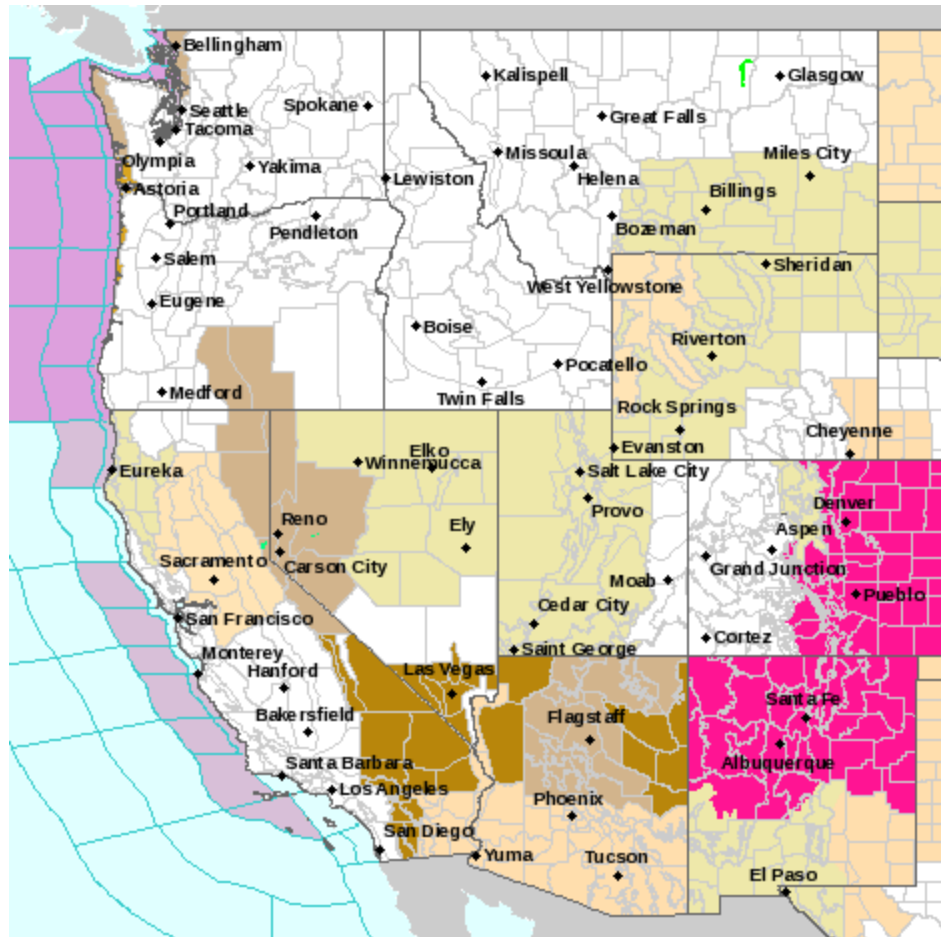

Weather models have done a good job predicting a pattern shift starting today and lasting through the week. A series of Pacific waves will swing over the NW third of the country starting today. Light to moderate rounds of precipitation should occur each day and favor the northern tier of the state, especially the North Coast and NW mountain PSAs. The wave passages will bring cooler temperatures and allow snow levels to be lower than what occurred a few days ago. Snow accumulation levels should range between 3,000 to 4,000 feet Wednesday night into Thursday. Southerly winds will increase Tuesday and Wednesday with peak gusts ranging between 35 to 45 mph favoring the higher peaks and the greater Weed. A little lighter W-SW wind flow expected on Thursday. Most of the weekend appears to be drier at this time, although due to the nature of the upcoming atmospheric pattern, some precipitation is likely and would favor the far north.

SOUTHERN CALIFORNIA

A ridge of high pressure over California will bring very warm and dry conditions to the region through today. Maximum temperatures will be 10 to 20 degrees above normal, with upper 60s and 70s across the mountains and 80s to mid 90s in the valleys. Minimum humidity will be mainly in the single digits and teens. A Pacific trough will approach the West Coast and move inland bringing significant cooling and an increase in humidity Wednesday and Thursday. This trough will also bring showers to the Sierra Wednesday night through Thursday morning with up to an inch of rainfall. The snow level will be around 6,000 feet. Westerly winds of 20 to 40 mph with gusts to 60 mph will surface across the wind prone mountain and desert areas Tuesday night through Thursday afternoon. Another ridge of high pressure will build into California from the Pacific Ocean bringing significant warming and drying to the region Friday through this weekend. Temperatures and humidity will be like what we are currently experiencing. Northerly winds of 20 to 40 mph with gusts to 60 mph will surface across much of Santa Barbara County and the Grapevine Thursday night.
